

Emergency Rescue Device - Rat Claw

Ibis Tek's "Rat Claw" Emergency Rescue Device has numerous uses. Vehicle doors are easily pulled open along with sealed compartments. The "Rat Claw", using a mechanical advantage, is put over the door, and when pulled by a secondary vehicle the door is easily sprung open. A safety strap attached to the "Rat Claw" prohibits the system from inadvertently causing collateral damage. Metal doors and window bars are easily pulled apart from the existing structure if entry is required, another vehicle is quickly towed to a safe location, and a vehicle can be uprighted in a matter of minutes if need be. Ibis Tek's "Rat Claw" should be in every police vehicle on duty. The "Rat Claw" enhances the security and safety of every officer.
