

### Dimensions

32" x 65"

### Portable Security

The transparent ballistic protection barrier consists of a transparent armor (TA) panel mounted in an easily movable wheeled frame. Unlike opaque gun shields, this transparent barrier provides a high level of protection without compromising visibility.

### The Ideal Transparent Protection

The Ibis Tek Transparent Ballistic Protection Barrier is perfect for indoor security screening stations, and with the interlocking frames, required protection areas can easily be enlarged. Possible applications:

Courthouses

Federal Buildings

Police Stations

Schools/Universities

Detention Facilities

Airports

Hospitals

### NIJ III      © .308 (7.62x51mm) rifle, FMJ

Transparent armor has been tested with NIJ Standard 0108.01 Level III. It also provides protection against lesser threats such as 5.56mm FMJ, 7.62x39mm FMJ, and most handguns.

# Transparent Ballistic Protection Barrier

NIJ III

## Ballistic Glass Panel

The no-spall armor design used for this product works in one direction; the “threat side” of the TA panel must face toward potential threats, while the “safe side” must face the area to be protected. Refer to Ibis Tek’s cleaning guide for proper cleaning methods.

## Wheeled Frame

The frame is constructed of aluminum with a steel base. The barrier is easily moved from one location to another with the integral wheel system attached. The frame can be disassembled to allow insertion of a new TA panel if the supplied panel becomes damaged.

## Interlocking Frames

Overlapping steel plates are available for 100% ballistic protection for interlocking frames.

## Full In-House Graphic Design, Print, & Application Services

Customize your barriers with our high quality graphics and text decal options.

## Typical Properties

Protection Barrier	NIJ III
Protection Barrier Panel Dimensions	32" x 65"
Protection Barrier Weight	310 lbs
Protection Barrier Base Footprint	33 1/2" x 24"
